```

CREACIÓN DE MIGRACIONES

The screenshot shows a Visual Studio Code interface with a dark theme. The left sidebar displays the project structure for a Laravel application, including the `REGISTROS-1` folder containing `app`, `database`, `migrations`, `seeders`, and other configuration files. The `migrations` folder contains several migration files, and the `seeders` folder contains the `CodigosPostalesSeeder.php` file, which is currently open in the editor.

The `CodigosPostalesSeeder.php` file contains the following code:

```
1 <?php
2
3 use Illuminate\Database\Migrations\Migration;
4 use Illuminate\Database\Schema\Blueprint;
5 use Illuminate\Support\Facades\Schema;
6
7 You, hace 58 minutos | 1 autor (You)
8 return new class extends Migration
9 {
10     /**
11      * Run the migrations.
12      *
13      * @return void
14      */
15     public function up()
16     {
17         Schema::create('codigos_postales', function (Blueprint $table) {
18             $table->id();
19             $table->string('codigo', 5);
20             $table->string('asentamiento', 100);
21             $table->string('tipo_asenta', 100);
22             $table->string('municipio', 100);
23             $table->string('estado', 100);
24             $table->string('ciudad', 100);
25             $table->timestamps();
26         });
27     }
28
29     /**
30      * Reverse the migrations.
31      *
32      * @return void
33      */
34     public function down()
35     {
36         Schema::dropIfExists('codigos_postales');
37     }
38 }
```

The code defines a `Schema::create` block for the `'codigos_postales'` table, specifying columns for `id`, `codigo` (5 characters), `asentamiento` (100 characters), `tipo_asenta` (100 characters), `municipio` (100 characters), `estado` (100 characters), and `ciudad` (100 characters). It also includes `timestamps` and `dropIfExists` methods.

The bottom of the editor shows the terminal output of running `php artisan db:seed` and `git status`:

```
PS C:\Users\User\OneDrive\Escritorio\Registros-1> php artisan db:seed
Seeding: DatabaseSeeders\CodigosPostalesSeeder
Seeded: DatabaseSeeders\CodigosPostalesSeeder (256,251.56ms)
Database seeding completed successfully.
PS C:\Users\User\OneDrive\Escritorio\Registros-1> git status
On branch main
Your branch is up to date with 'origin/main'.

Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
    modified:   database/migrations/2022_03_11_015352_create_codigos_postales_table.php
    modified:   database/seeders/CodigosPostalesSeeder.php

no changes added to commit (use "git add" and/or "git commit -a")
PS C:\Users\User\OneDrive\Escritorio\Registros-1> git add .
warning: LF will be replaced by CRLF in database/migrations/2022_03_11_015352_create_codigos_postales_table.php.
The file will have its original line endings in your working directory
warning: LF will be replaced by CRLF in database/seeders/CodigosPostalesSeeder.php.
The file will have its original line endings in your working directory
PS C:\Users\User\OneDrive\Escritorio\Registros-1> git commit -m "porFin"
```

The status bar at the bottom indicates the file is 24 lines long, 34 characters wide, and 4 hours old. It also shows the current file is `server.php`.

CREACIÓN DE MODELO

The screenshot shows a Visual Studio Code interface with the following details:

- File Explorer:** Shows the project structure for a Laravel application named "Registros-1". The "Models" folder contains a file named "codigos_postales.php".
- Code Editor:** The "codigos_postales.php" file is open, showing the following code:

```
<?php
namespace App\Models;

use Illuminate\Database\Eloquent\Factories\HasFactory;
use Illuminate\Database\Eloquent\Model;

class codigos_postales extends Model
{
    use HasFactory;
    protected $table = 'codigos_postales';
}
```

- Terminal:** The terminal shows the execution of artisan commands and git operations:

```
PS C:\Users\User\OneDrive\Escritorio\Registros-1> php artisan db:seed
Seeding: Database\Seeders\codigosPostalesSeeder (256,251.56ms)
Database seeding completed successfully.
PS C:\Users\User\OneDrive\Escritorio\Registros-1> git status
On branch main
Your branch is up to date with 'origin/main'.

Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
    modified:   database/migrations/2022_03_11_015352_create_codigos_postales_table.php
    modified:   database/seeders/CodigosPostalesSeeder.php

no changes added to commit (use "git add" and/or "git commit -a")
PS C:\Users\User\OneDrive\Escritorio\Registros-1> git add .
warning: LF will be replaced by CRLF in database/migrations/2022_03_11_015352_create_codigos_postales_table.php.
The file will have its original line endings in your working directory

MANDAMOS A LLAMAR EL SEEDER

The screenshot shows a Visual Studio Code interface with the following details:

- Explorer:** Shows the project structure for "Registros-1". The "seeders" folder contains "DatabaseSeeder.php" and "CódigosPostalesSeeder.php".
- Code Editor:** Displays the content of `DatabaseSeeder.php` (Registers-1 - Visual Studio Code). The code defines a `DatabaseSeeder` class that extends `Seeder` and overrides the `run` method to call the `CódigosPostalesSeeder::class`.
- Terminal:** Shows the command line output for running the Seeder:

```
PS C:\Users\User\OneDrive\Escritorio\Registros-1> php artisan db:seed
Seeding: DatabaseSeeders\CódigosPostalesSeeder
Seeded: DatabaseSeeders\CódigosPostalesSeeder (256,251.56ms)
Database seeding completed successfully.
PS C:\Users\User\OneDrive\Escritorio\Registros-1> git status
